

# Power Probe Electric Brake Bleeding System

## The Brake Bleeder for the Professional

Our all electric powered pressure brake bleeder is simply the most user friendly and efficient way to flush and bleed today's high tech brake systems. Being electric powered, the Power Probe brake bleeder eliminates the hassles associated with both air pressure and vacuum style brake bleeding. The adjustable pressure regulator enables you to set the operating pressure between 0 and 80 PSI and more importantly maintains constant pressure at all four wheels throughout the service. The one man operation ensures maximum profitability for the shop by allowing other technicians to service other vehicles. The easy to read fluid level indicator eliminates the guess work by showing the exact fluid level at all times. In the event the bleeder runs low on fluid in the middle of the job -- no need to worry; The low level warning indicator instantly informs you of a low fluid condition with its dual alert system. The brake bleeder will automatically shut itself off, preventing air from getting into the brake system. The conveniently located fill tube makes refilling a snap. No more messy diaphragms or depressurizing necessary, just simply open the twist cap and pour. You can rely on the Power Probe Electric Brake Bleeding System to provide you with years of trouble free service.
