

The Probe Instructions

Connect alligator clip to positive or negative source on vehicle. When testing for voltage or ground. Switch must be pressed. When bulb illuminates, voltage is present. If voltage is greater than 12.0v, the bulb will illuminate and tool will vibrate. On a good ground, the bulb will illuminate green. On a bad ground, or a resistance of 10 to 600 Ohms, the Tool will illuminate Blue.

Installing / Replacing Battery

1. Unscrew end cap of tool
2. With your hand holding the tool, slide switch back and gain access to circuit board
3. Install battery with negative (-) side facing the circuit board.
4. Re-install switch and screw end cap of tool.
