The **Power Probe DC Voltage Tester** is an easy to use tool that can quickly test for voltage from 5 to 35 volts.

Not only extensively used on 12v automotive and 24v commercial vehicles for voltage detection applications, but also invaluable for voltage detection on caravans, trailers, motor bikes, plant and agricultural vehicles. Can be used for checking battery voltage, electric windows, lighting circuits, fuse boxes.

Main features:

Reads a positive and negative voltage.
One tool to read all voltages in a circuit.
No need to have multiple tools.

Large LCD Display.
Can be seen clearly from a distance.
No need to get up close to read the results.

Precision engineered probe.
Helps to maintain contact on slippery contacts.
Maintains constant reading.

Measures in incremental points.
Shows voltage increase or decrease.
Gives the exact reading of the circuit.

Can operate in extreme temperatures.
Can be used in different working environments.
No need for additional tools.

Small and light weight.
Works well in small spaces.
Giving you extra room to manoeuvre.

SPECS

- **DC Voltage Measurement:** 5.0- 35.0 V
- **Voltage Step:** 0.1 V
- **Accuracy:** $\pm(1\% + \text{digital})$
- **Response Time:** 0.5s
- **Max Operating temp:** -10°C to 50°C
- **Max Storage Temp:** -10°C to 60°C
- **Relative Humidity:** 80% Maximum
- **Altitude:** <7000ft (2000m)
- **Certification:** CE
- **Power Supply:** Self powered-No battery needed
- **Cord with alligator clip length:**18-Inch (0,45cm)
- **Weight:** 75g
- **Dimensions:** 223X40X32mm
